Lapiplasty®

Big Toe Joint Fusion

Lapiplasty®

Big Toe Joint Fusion

How it works

First-

The bone surfaces are prepared and advanced instrumentation is designed to straighten the big toe, repositioning the 3D alignment of the joint.

"Patients suffering at the big toe joint are still candidates for Lapiplasty®, benefiting from the same technology, just with the fusion taking place at the MTP (big toe) joint."

Dr. William DeCarbo

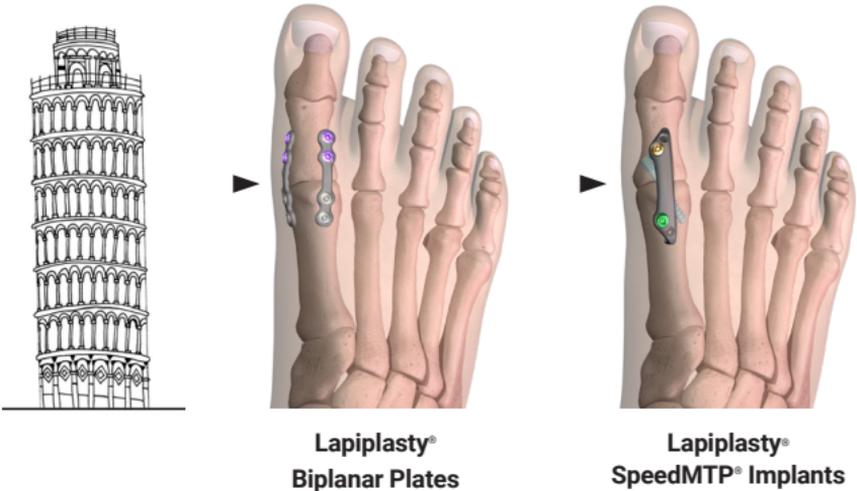

Did you know?

"In my practice, I **weight-bear** my patients in a protective boot **within days of surgery**. I am a big believer in early weight-bearing to help promote a speedy recovery. The Treace Medical Concepts hardware technology helps me achieve those goals.[†]"
Dr. Robert Santrock

Then-

Patented Lapiplasty® titanium implants secure the big toe alignment.

An arthrodesis (fusion) of the big toe joint using Lapiplasty® technology:

- ✓ Aimed at getting you back on your feet quickly, in a boot.*
- ✓ Designed to straighten the big toe and restore 3D alignment of the big toe joint.
- ✓ Patented Lapiplasty® fixation technology secures the joint using low-profile implants that help reduce the chance of irritation.

You have questions...

We have answers from doctors*

How does Lapiplasty® Big Toe Joint Fusion differ from “normal” Lapiplasty®?

“ The concept of Lapiplasty® Big Toe Joint Fusion differs in that the patented plates are placed at a different joint location - the big toe joint versus the base of the metatarsal joint.”

– *Dr. Mindi Dayton*

Is Lapiplasty® Big Toe Joint Fusion covered by insurance and Medicare?

Yes. Insurance and Medicare typically cover bunionectomy and joint fusion procedures that utilize the Lapiplasty® System when deemed medically necessary. Your doctor’s office can reach out to your provider to determine your level of coverage. This process is best left to your doctor’s office.

**Physicians are paid consultants of Treace Medical Concepts, Inc.*

Ask if Lapiplasty® Big Toe Joint Fusion is right for you.

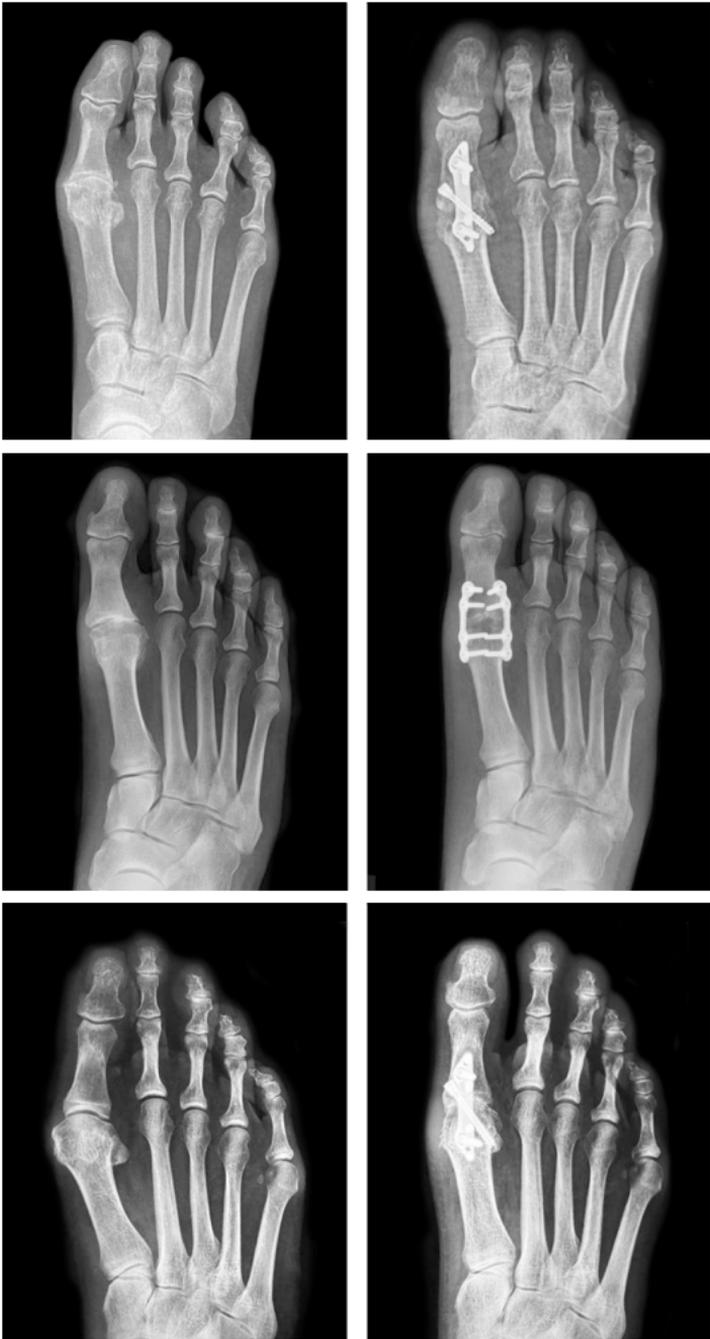

**“After walking off balance for five years to
compensate for the pain,
I’m finally able to walk normally again.**

**Just four months after surgery,
I’m back to doing all the activities
that I enjoy again like golf, hunting, and my
evening walks.”**

Mark, Lapiplasty® Big Toe Joint Fusion patient

The results speak for themselves

*Constructs shown at surgeons' discretion. Individual results may vary.
Examples are pre- and post-op xrays

**“ If I’d have known I’d be this happy
after Lapiplasty® Big Toe Joint Fusion,
I’d have done it five years ago. ”**

Big Toe Joint Fusion

†Of course, recovery varies by patient, as care differs depending on the individual's needs and surgeon's medical opinion/preference. Each individual's experience is unique to them, but we invite you to visit www.Lapiplasty.com to read more patient stories and to learn more about the procedure, including the risks associated with surgery.

Only a surgeon can tell if Lapiplasty® Big Toe Joint Fusion is right for you.

There are potential risks with surgery and recovery takes time. Potential risks include, but are not limited to: infection, discomfort from the presence of the implant, loosening of the implant, and loss of correction with nonunion or malunion - which means that the bone does not heal correctly.

For more information, including benefit and risk information about the procedure, please visit www.Lapiplasty.com.
